# POWER PLANT DECOMMISSIONING:

- Steam Turbine Removal and All Corresponding Equipment
- Turbine Generator Dismantling and Removal
- Power Plant Stack Demolition and Dismantling
- Industrial Rigging and Removal of Power Plant Equipment
- Plant Machinery and Equipment Rigging and Removal

New emissions regulations and low natural gas prices, partly because of the fracking boom throughout the U.S., are leading utilities to shut down coal-fired power plants and open new ones that burn natural gas. With new Environmental Protection Agency emissions standards limiting mercury, acid gases and toxic metals from coal-fired power plants taking effect in 2015, there is even more impetus for utilities to retire older coal plants, according to the EIA.

This being said IFL will purchase a Entire power plant with all environmental issues as is where is and pay owners fair market price.

**IFL is always looking to buy complete steam turbines and perform removal without interrupting energy providers work place.**
